MERN Stack Developer

PROFESSIONAL SUMMARY

Recently BCA graduated student and MERN Stack Developer with hands-on experience building and deploying full-stack web applications. Completed professional MERN training at IIT Kanpur and a web development internship at CodeSoft. Built InterviewIQ.AI — an AI-powered mock interview platform with resume parsing, AI-generated questions, Razorpay payment integration, and analytics dashboards — deployed live on Render. Currently developing CollabSpace, a real-time collaboration platform for college students featuring Socket.io-based chat, AI-powered project recommendations, and integration-tested APIs with Jest and Supertest. Comfortable across the full stack: React.js frontends, Node.js/Express.js backends, MongoDB, JWT auth, and Render/Vercel deployments.

TECHNICAL SKILLS

Frontend: React.js, Material UI (MUI), Tailwind CSS, HTML5, CSS3, JavaScript (ES6+), Bootstrap

Backend: Node.js, Express.js, Socket.io, REST APIs, JWT Auth, Bcryptjs, Multer, MVC Architecture

Database: MongoDB, Mongoose, CRUD Operations

Testing: Jest, Supertest, mongodb-memory-server

AI / APIs: OpenRouter (Llama 3.3 70B, GPT-4o-mini), REST API Integration

Tools: Git, GitHub, Postman, Vite, Render, Vercel, Firebase, Sentry

Libraries: Recharts, jsPDF, Axios, React Router, pdfjs-dist, Redux Toolkit, Motion

Practices: Responsive Design, Component Architecture, Agile/Scrum, Unit Testing

PROJECTS

CollabSpace — Real-Time Collaboration Platform for College Students

2025 – Present

Node.js · Express.js · MongoDB · React.js · Socket.io · Material UI · OpenRouter (Llama 3.3 70B) · Jest · Supertest · Sentry

- Architected a full-stack MERN platform where students post project ideas with required skills and team size; other students send join requests that project leaders approve or reject, with all events delivered in real time via Socket.io.
- Implemented room-based real-time chat using Socket.io — messages are persisted to MongoDB and broadcast instantly to all project members; per-user notification rooms deliver approve/reject alerts without polling.
- Integrated OpenRouter AI (Llama 3.3 70B) to rank open projects against a user's rated skill set, returning structured JSON match scores and reasoning for personalised project recommendations.
- Wrote integration tests with Jest, Supertest, and mongodb-memory-server — covering auth registration, duplicate email validation, and API response shapes against an in-memory DB; secured routes with JWT + bcryptjs password hashing and monitored server errors via Sentry.

InterviewIQ.AI — AI-Powered Mock Interview Platform

Capstone | 2025–26

Node.js · Express.js · MongoDB · React.js · Redux Toolkit · OpenRouter (GPT-4o-mini) · Razorpay · Recharts · jsPDF · Firebase · Render

- Architected a full-stack interview platform where users upload a resume (PDF), the backend parses it with pdfjs-dist and calls OpenRouter (GPT-4o-mini) to extract role, experience, and skills — then generates 5 questions with progressive difficulty (easy → medium → hard) and per-question time limits (60/90/120 seconds).
- Built AI answer evaluation that scores each response across confidence, communication, and correctness (0–10), returning aggregated final scores and human-style feedback; results rendered in Recharts dashboards and exported as jsPDF reports.

- ▶ Integrated Razorpay payment gateway with a server-side credit system — backend verifies payment signature before updating MongoDB balance, preventing free credit exploits; all routes secured with JWT auth and Google OAuth via Firebase.
- ▶ Deployed backend on Render with CORS whitelisting for the React + Redux Toolkit frontend; managed environment variables via dotenv to keep API keys (OpenRouter, Razorpay, Firebase) out of version control.

ACHIEVEMENTS

- ▶ **Live Full-Stack Deployment:** Shipped InterviewIQ.AI end-to-end — backend on Render, frontend on Render — as a solo developer, making it publicly accessible and production-ready.
- ▶ **Integration Testing from Scratch:** Independently set up Jest + Supertest + mongodb-memory-server testing pipeline for CollabSpace with zero prior testing experience, writing tests that run against an isolated in-memory database.
- ▶ **Real-Time Systems:** Designed and implemented a Socket.io architecture handling concurrent room-based chat and per-user notification delivery across multiple active projects in CollabSpace.

INTERNSHIP EXPERIENCE

CodeSoft | Web Development Intern (Remote)

Jun 2025 – Jul 2025

- ▶ Delivered three front-end projects — a landing page, a calculator, and a third task — using HTML5, CSS3, and vanilla JavaScript within sprint-based Agile workflows.
- ▶ Debugged and optimised CSS layout and responsiveness issues, achieving a 15% improvement in responsiveness across mobile breakpoints.
- ▶ Collaborated via Git and GitHub — created feature branches, committed iteratively, and maintained a clean commit history throughout the internship.

PROFESSIONAL TRAINING

MERN Stack Development Program – IIT Kanpur (IITK)

2024

- ▶ Completed an intensive project-based curriculum covering React.js, Node.js, Express.js, and MongoDB, with a focus on REST API design, database integration, and full-stack deployment workflows.

CERTIFICATIONS

- ▶ **MERN Stack Development** – IIT Kanpur
- ▶ **Front-End Software Engineering** – Skyscanner / Forage
- ▶ **Claude Code In Action** – Anthropic
- ▶ **CSS** – Oneroadmap
- ▶ **Version Control with Git** – Meta

EDUCATION

Bachelor of Computer Applications (BCA)

2023 – 2026

Institute of Management Studies (IMS), Ghaziabad – University Courses Campus

Intermediate (Class XII)

2022 – 2023

Saraswati Bal Mandir Sr. Sec. School

Matriculation (Class X): *Saraswati Bal Mandir Sr. Sec. School*

2020 – 2021
